Firstly I am extremely sorry for the late response. Actually I was busy with my family and my family was hospitalized so I couldn't respond to you sorry again and please pardon me.

I reviewed your last docs file where you include A to Z your application requirements.
And yes I can fulfill most of these functional requirements using Odoo, but some advanced or highly customized functionalities might require additional customization. Here's a breakdown of how we can implement these features using Odoo's existing apps and potential custom development.

Implementable Using Odoo Existing Modules (Minimal Customization). These functionalities can be achieved using Odoo's standard modules with minor configurations:

1. Creation of multimedia courses

2. Course structured into modules/lessons

3. Certificate generation for attendance/completion.

4. Manual creation of client companies and their admins.

5. Ability to assign courses to employees.

6. Access to courses with personal login

7. Reports for company admins

8. Regular data and content backups

9. Two-factor authentication for admins

Needs High Customization & Modifications to Existing Odoo Features.

1. Non-downloadable videos → Odoo eLearning doesn't prevent downloads; requires custom streaming setup.
2. Manual assignment of purchased courses → Needs customized workflow in Odoo eLearning.
3. Tracking of course completion → Odoo tracks progress but needs enhanced tracking & reporting.
4. Employee progress reporting → Odoo supports reports, but custom progress indicators are needed.
5. Progress bar for course completion → Requires UI modifications in Odoo eLearning.
6. Gamification system with badges → Odoo has a Gamification module, but it needs custom rules.
7. Top Performer / Most Consistent - badge → Needs custom performance tracking rules.

8. Other configurable badges → Odoo Gamification module needs custom badge conditions.
9. Reports for CyberAcademyItalia → Needs custom report templates.

Needs Full Custom Development New Features Required & These functionalities do not exist in Odoo and require custom modules:

1. Association of resellers with client companies via CRM → Requires a custom reseller management module in CRM.
2. Cybersecurity expertise chatbot → Odoo does not have an AI-driven chatbot for cybersecurity.

 Brother if you agree we can arrange a short meeting about this project requirements or you can message me.
